Project Name	UNESCO World Heritage Sites Analysis Using Tableau
Marks	

Overview:

UNESCO World Heritage Sites Analysis is an interactive data visualization project developed using **Tableau** to analyze UNESCO World Heritage Sites across different countries and regions. The project transforms raw heritage site data into meaningful visualizations, allowing users to explore site distribution, heritage categories, endangered sites, geographical patterns, and historical trends. Interactive dashboards, KPI cards, maps, charts, filters, and forecasting techniques are used to provide clear insights that support research, conservation planning, and informed decision-making.

Purpose:

The purpose of this project is to simplify the analysis of UNESCO World Heritage data by converting complex datasets into interactive dashboards. The dashboard enables users to compare regions, identify endangered heritage sites, monitor historical trends, and generate insights quickly using Tableau's visualization capabilities. This project demonstrates the practical application of Business Intelligence and Data Analytics for cultural heritage management.
